EDUCATION

Carleton University Ottawa, ON
Bachelor of Software Engineering | Graduated July 2026

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, Go, Racket, SQL, C, HTML/CSS
Web and databases: React, Next.js, Node.js, Express, Prisma, PostgreSQL, SQLite
Tools and testing: Arch Linux, OpenCode, Git, JUnit, Maven

PROJECTS

JobPilot | Job application tracker
TypeScript, Next.js, React, Prisma, SQLite

- Built a full-stack application to track job applications, status changes, interviews, notes, and private documents, with search, filtering, and recovery of deleted applications.
- The application uses password-based login and database-backed sessions, with access checks that limit users to their own records and attachments.
- Guest users can save applications and notes before signing up; a database transaction transfers their work into a registered account.
- The project includes database integration tests and Playwright browser tests, with automated checks and builds through GitHub Actions.

Smart Scheduler | Carleton engineering capstone
TypeScript, PostgreSQL, Prisma, Express, React

- Designed the relational database schema and Prisma models for a four-person course-planning application, supporting a catalog of 348 courses and 322 parsed prerequisite trees.
- Represented prerequisite rules as trees in the database, supporting nested AND/OR conditions, minimum grades, and year-standing requirements.
- Contributed logic that recursively checks prerequisite trees against a student's completed courses and grades and reports unmet requirements.

Firefighting Drone Swarm | Real-time control-system simulation
Java, UDP, Maven, JUnit

- Co-developed a four-person Java/UDP firefighting-drone simulation, implementing the initial Scheduler and Fire Incident subsystems and extending distributed dispatch, telemetry, and queue handling.
- Completed fault-recovery and reassignment flows for stuck, communication, and nozzle faults, with JUnit coverage for recovery, timeouts, hard-fault shutdown, and queue order.
- Built the live Swing dashboard and finalized the configurable 20-drone demo workflow, including incident, assignment, telemetry, fault, and metrics views.

EXPERIENCE

Electronics Repair Technician | uBreakiFix (now Mobile Klinik) June 2020–September 2021
Kanata, ON

- Diagnosed and repaired mobile-device hardware, software, and connectivity issues using diagnostic tools to identify the underlying faults.
- Tested repaired devices to verify functionality and confirm that the original issues were resolved before returning them to customers.
- Managed replacement-parts inventory by ordering stock and processed warranty repairs in accordance with mobile protection-plan requirements.
